

ABSTRACT

It is an object of the present invention to provide a method of reproducing stream data according to which the synchronization between the reproduction of the stream data
5 such as sound data and the operation of an application can be easily achieved.

Sound data is sequentially reproduced and the reproduction of the sound data is monitored. When the data has been reproduced up to a mark position (A to E) specified
10 in an action definition file, the occurrence of the event is notified to the application.
